### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.
2. Authorization for this examiner's amendment was given in a telephone interview with Michael Striker, Reg. No. 27,233 on 3/16/06 and William Valance, Reg. No. 28,275 on 3/17/06.
3. In the claims filed 2/23/06:
  - I. In claim 14:
    - (i.) 14.(new) An electronic monitoring circuit for monitoring one of at least two series-connected capacitor units in an intermediate circuit in order to detect short-circuiting of said one of said capacitor units, said monitoring circuit (16) comprising:
      - means for deriving a reference voltage (14) from an intermediate-circuit voltage (L(+).L(-)) applied across said at least two series-connected capacitor units (1, 2);
      - means for generating a control signal consisting of a voltage difference between said reference voltage (14) and a junction voltage at a junction (13) between two of said capacitor units (1, 2); and

means for generating an error signal when said control signal falls below or exceeds an activation threshold voltage thus indicating that said one of said capacitor units (1.2) has been short-circuited;

wherein said means for generating said error signal when said voltage difference falls below or exceeds said activation threshold voltage comprises a zener diode (15) and said activation threshold voltage corresponds to a breakdown voltage of said zener diode.

(II) Cancel claim 16.

(III) In claim 19:

(i.) line 4, replace “with” with –when—.

***Allowable Subject Matter***

4. Claim 14, 15, and 17-25 are allowed over the prior art of record.

The prior art of record fails to teach in combination as claimed an electronic monitoring circuit for monitoring one of at least two series-connected capacitor units in an intermediate circuit in order to detect short-circuiting of one of the capacitor units. The monitoring circuit includes generating an error signal when the control signal falls below or exceeds an activation threshold voltage thus indicating that one of the capacitor units has been short-circuited. The means for generating the error signal when the voltage difference falls below or exceeds the activation threshold voltage comprises a zener diode

Art Unit: 2858

and the activation threshold voltage corresponds to a breakdown voltage of the zener diode.
